

Anyone would think that designing a technological line, it is electric, telephone or irrigation may mean joining a delivery point and the point of junction with a straight line, in reality the design of a technological line is a very complex science requiring years of experience in order to assess:

- The path less rough considered constraints and interference;
- Choice of materials appropriate to the type of network and land;
- Compliance with local regulations;
- The lowest cost.

In addition to design a technological line also includes all the authorization phase to ensure that the work becomes feasible in practice.

The GEOSIS Ltd. thanks to years of field experience with major companies of technological lines is able to successfully resolve all these issues in order to offer its customers a result cantierizzabile.
